GRANTS

Loyola University Chicago Summer Research Stipend PI: Dana Garbarski Gender, Cumulative Disadvantage and Health. Awarded for summer 2016. \$7,000.	<i>2016</i>
Center for Demography of Health and Aging (CDHA) Pilot grant, UW-Madison PI: Jennifer Dykema Co-I: Dana Garbarski, Nora Cate Schaeffer, Kerryann DiLoreto, Kenneth D. Croes Uncovering the Relationship between Interviewer-Respondent Interaction and Compliance in the Collection of Anthropometric Measures and Physical Performance Assessments. Awarded for AY 2015/2016. Funding for 50% annual RA/PA.	<i>2015</i>
Center for Demography of Health and Aging (CDHA) Pilot grant, UW-Madison PI: Nora Cate Schaeffer Co-I: Dana Garbarski, Jennifer Dykema Standardization and Motivation to Provide DNA Samples: Rapport and Motivation in the Standardized Interview. Awarded for AY 2014/2015. Funding deferred and used beginning 1 June 2015. Funding for 50% annual RA/PA.	<i>2014</i>
The Charles Cannell Fund in Survey Methodology PI: Dana Garbarski Awarded \$10,259 to study interviewer and respondent interactional rapport during the end-of-life planning section of the Wisconsin Longitudinal Study. The purpose of this study is to address two overarching goals: to investigate how interviewers and respondents interactionally deal with potentially sensitive or threatening topics, and to explore the interactional cues associated with concordant and discordant proxy reports of the end-of-life treatment preferences of one's spouse.	<i>2012</i>

EXTERNAL DATA RESOURCES AWARDED

- General Social Survey (GSS) Open Module Competition 2015
The GSS will field the experiment *Interviewers' Ratings of Respondents' Health*, designed by Dana Garbarski, Nora Cate Schaeffer, and Jennifer Dykema. This experiment involves interviewers' ratings of respondents' health for the 2016 GSS. This project examines the validity of interviewers' ratings of respondents' general health status with an experiment that varies when in a face-to-face interview the interviewer is asked to rate the respondent's health: at the beginning of the interview before any substantive questions are asked or at the end of interview. Incorporating the interviewer's assessment of the respondent's health might be a cost-effective measure of health to include in surveys and is consistent with the increasing use of interviewer observations in survey research. This experiment seeks to delineate what factors contribute to interviewers' assessments of respondents' health.
- Innovation Panel Open Module Competition 2014
The Innovation Panel, part of the UK longitudinal study Understanding Society, fielded the experiment *Examining the Validity of Interviewers' Ratings of Respondents' Health*, designed by Dana Garbarski, Nora Cate Schaeffer, and Jennifer Dykema. This project examines the validity of interviewers' ratings of respondents' general health status with an experiment that varies when in a face-to-face interview the interviewer is asked to rate the respondent's health: at the beginning of the interview before any substantive questions are asked or at the end of interview. For telephone interviews (if administered), the interviewer's rating of the respondent's health will occur at the end of the interview to allow for a comparison to this circumstance in which interviewers are not able to observe physical cues. Incorporating the interviewer's assessment of the respondent's health might be a cost-effective measure of health to include in surveys and is consistent with the increasing use of interviewer observations in survey research. This experiment seeks to delineate what factors contribute to interviewers' assessments of respondents' health.
- RTI International Research Challenge 2012
RTI International fielded the experiment *Improving Measurement of Self-Reported Health: Effects of Question Context and Response Order*, designed by Dana Garbarski, Nora Cate Schaeffer, and Jennifer Dykema. This experiment is embedded in a web-based survey of a representative sample of the US adult population, examining whether the validity of self-reported health improved by varying question context and the ordering of the response options. The project contributed to research on survey methodology, health outcomes and disparities, and fields interested in capturing indicators of health in their surveys.
- Time-sharing Experiments for the Social Sciences Module 2012
TESS fielded the experiment *Improving Measurement of Self-Reported Health: Effects of Question Context and Response Order*, designed by Dana Garbarski, Nora Cate Schaeffer, and Jennifer Dykema. This experiment is embedded in a web-based survey of a representative sample of the US adult population, examining whether the validity of self-reported health improved by varying question context and the ordering of

the response options. The project contributed to research on survey methodology, health outcomes and disparities, and fields interested in capturing indicators of health in their surveys.
